SIERRA
WIRELESS™

4112895
Rev 6

Important Notice

Due to the nature of wireless communications, transmission and reception of data can never be guaranteed. Data may be delayed, corrupted (i.e., have errors) or be totally lost. Although significant delays or losses of data are rare when wireless devices such as the Sierra Wireless modem are used in a normal manner with a well-constructed network, the Sierra Wireless modem should not be used in situations where failure to transmit or receive data could result in damage of any kind to the user or any other party, including but not limited to personal injury, death, or loss of property. Sierra Wireless accepts no responsibility for damages of any kind resulting from delays or errors in data transmitted or received using the Sierra Wireless modem, or for failure of the Sierra Wireless modem to transmit or receive such data.

Safety and Hazards

Do not operate the Sierra Wireless modem in areas where blasting is in progress, near medical equipment, near life support equipment, or any equipment which may be susceptible to any form of radio interference. In such areas, the Sierra Wireless modem **MUST BE POWERED OFF**. The Sierra Wireless modem can transmit signals that could interfere with this equipment.

The driver or operator of any vehicle should not operate the Sierra Wireless modem while in control of a vehicle. Doing so will detract from the driver or operator's control and operation of that vehicle. In some states and provinces, operating such communications devices while in control of a vehicle is an offence.

In accordance with ANSI/ISA 12.12.1-2011, Section 16 and CSA C22.2 No 213, Section 5.5, the following instructions and warnings apply:

This apparatus is suitable for use in Class I, Division 2, Groups A, B, C and D classified Hazardous Locations.

Warning: *EXPLOSION HAZARD—SUBSTITUTION OF COMPONENTS MAY IMPAIR SUITABILITY FOR CLASS I, DIVISION 2.*

Avertissement: *RISQUE D'EXPLOSION-LA SUBSTITUTION DE COMPOSANTS PEUT RENDRE CE MATERIEL INACCEPTABLE POUR LES EMPLACEMENTS DE CLASSE I, DIVISION 2.*

Warning: *EXPLOSION HAZARD—DO NOT DISCONNECT WHILE CIRCUIT IS LIVE UNLESS THE AREA IS KNOWN TO BE NON-HAZARDOUS.*

Avertissement: *RISQUE D'EXPLOSION-NE PAS DEBRANCHER TANT QUE LE CIRCUIT EST SOURS TENSION, A MOINES QU'IL NE S'AGISSE D'UN EMPLACEMENT NON DANGEREUX.*

Warning: *DO NOT USE THE USB CONNECTOR IN A HAZARDOUS AREA.*

Avertissement: *NE PAS UTILISER DE CONNECTEUR USB DANS LES ENVIRONNEMENTS DANGEREUX.*

Warning: *DO NOT USE THE RESET BUTTON IN A HAZARDOUS AREA.*

Avertissement: *NE PAS UTILISER LE BOUTON DE RESET DANS UN ENVIRONNEMENT DANGEREUX.*

Limitation of Liability

The information in this manual is subject to change without notice and does not represent a commitment on the part of Sierra Wireless. SIERRA WIRELESS AND ITS AFFILIATES SPECIFICALLY DISCLAIM LIABILITY FOR ANY AND ALL DIRECT, INDIRECT, SPECIAL, GENERAL, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR EXEMPLARY DAMAGES INCLUDING, BUT NOT LIMITED TO, LOSS OF PROFITS OR REVENUE OR ANTICIPATED PROFITS OR REVENUE ARISING OUT OF THE USE OR INABILITY TO USE ANY SIERRA WIRELESS PRODUCT, EVEN IF SIERRA WIRELESS AND/OR ITS AFFILIATES HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES OR THEY ARE FORESEEABLE OR FOR CLAIMS BY ANY THIRD PARTY.

Notwithstanding the foregoing, in no event shall Sierra Wireless and/or its affiliates aggregate liability arising under or in connection with the Sierra Wireless product, regardless of the number of events, occurrences, or claims giving rise to liability, be in excess of the price paid by the purchaser for the Sierra Wireless product.

Patents

This product may contain technology developed by or for Sierra Wireless Inc. This product includes technology licensed from QUALCOMM[®]. This product is manufactured or sold by Sierra Wireless Inc. or its affiliates under one or more patents licensed from InterDigital Group and MMP Portfolio Licensing.

1: Introduction to the AirLink LS300

1

The AirLink[®] LS300 is a compact, intelligent and fully-featured communications platform that provides real-time wireless capabilities for fixed and mobile applications. It is intended for use in industrial setting such as:

- Remotely monitoring and controlling infrastructure and surveillance equipment on pipelines, meters, pumps and valves in any energy, utility, or industrial application
- Tracking the location of heavy equipment and assets in the field
- Providing reliable Internet access to a mobile workforce

The AirLink LS300 has multiple communication ports including serial, Ethernet, and USB ports. The power connector has one GPI I/O pin for remote monitoring and control and one ignition sense pin to turn the device on and off and trigger the low power mode.

The AirLink LS300 is a 3G cellular device that supports a variety of radio bands options, both on HSPA+ or CDMA EV-DO mobile broadband technology.

The AirLink LS300, when coupled with the rich embedded intelligence provided by the embedded ALEOS[®] software, is the perfect choice for a broad set of machine to machine solutions.

AirLink LS300 Device Configuration and Management

You can configure and manage your AirLink LS300 using:

- **ACEmanager**—a browser-based application
Refer to the ALEOS Software Configuration User Guide available for download at source.sierrawireless.com.
- **AirLink Management Service (ALMS)**—a cloud-based device management service provided by Sierra Wireless®
For more information on ALMS, visit: www.sierrawireless.com/ALMS
or contact your Sierra Wireless distributor.
- **AT Commands**
For a complete list of AT Command, refer to the ALEOS Software Configuration User Guide

Accessories Available

- DIN rail mounting bracket
- Screw-in mounting bracket
- Antennas: GPS and Cellular for CDMA and GSM
- AC 12VDC power adapter
- DC power cord
- Cigarette lighter adapter
- Ethernet cable
- DB-9 serial cable (6 ft and 25 ft lengths)
- USB cable

2: Specifications at a Glance

This section gives a brief summary of the critical high-level features of the LS300 Sierra Wireless gateway.

For more information on device management, custom applications and configuring LS300 features such as VPN, Security, Authentication, and Events Reporting, refer to the ALEOS Software Configuration User Guide and the AirLink Management Service website www.sierrawireless.com/ALMS.

Table 2-1: Specifications

Industry Certification and Mobile Network Operator Approvals	<ul style="list-style-type: none"> • FCC • Industry Canada • CE • PTCRB • R&TTE • RoHS Compliant • Class 1, Div 2 • Military Spec MIL-STD-810 conformance to thermal, mechanical shock, and humidity • Approved for deployment by Verizon Wireless, AT&T, Sprint, Rogers, Bell and Telus
Network Technology	3G HSPA+ Models Fallback to GSM / GPRS / EDGE <ul style="list-style-type: none"> • 800 / 850 / 1900 / 2100 MHz Sierra Wireless SL8090 radio module • 900 / 2100 MHz Sierra Wireless SL8092 radio module • Peak data rates <ul style="list-style-type: none"> • Download (HSDPA Category 10) — 14.4 Mbps (peak rate) • Upload (HSUPA Category 6) — 5.76 Mbps
	3G EV-DO Models Fallback CDMA 1xRTT <ul style="list-style-type: none"> • Rev. A 800 / 1900 MHz Sierra Wireless SL5011 radio module • Peak CDMA data rates <ul style="list-style-type: none"> • Download — 3.1 Mbps (peak rate) • Upload — 1.8 Mbps

Table 2-1: Specifications

Host Interfaces	<ul style="list-style-type: none"> • 10/100 Base-T RJ45 Ethernet • RS-232 serial port • USB V2.0 Micro-B connector • 2 SMA antenna connectors (Primary, GPS/Diversity) • Active antenna support
Input/Output	<p>Configurable I/O pin on power connector</p> <ul style="list-style-type: none"> • Digital Input ON voltage: 3.3 to 30 VDC • Digital input OFF voltage: 0 to 1.2 VDC • Analog input voltage: 0 to 30 VDC • Open collector output < 200mA @ 30 VDC: 3.3 to 30 VDC
Power Adapter pins	<p>4-Pin connector:</p> <ul style="list-style-type: none"> • Power • Ground • Configurable digital I/O and analog voltage input sensing • Configurable ignition sense (Low Power Mode Enable Input)

Events Reporting	<ul style="list-style-type: none">• Event Types: digital input, GPS/AVL, network parameters, data usage, timer, power, device temperature• Report types: SMS, email, SNMP trap, relay output, GPS RAP reports, Events Protocol Message to Server

3: Installation and Startup

This chapter shows you how to connect, install and start the Sierra Wireless AirLink LS300. It also describes the front panel LEDs.

Note: The LS300 installation must be done by a qualified technician.

Tools and Materials Required

- A SIM card (provided by your mobile network operator, if required)
- #0 Phillips screwdriver (if you are installing the SIM card)
- Laptop computer with Ethernet cable
- Wireless antenna
- Optional—a GPS antenna or diversity antenna
- AC or DC power cable (available from Sierra Wireless or use your own custom cable)
- Optional—a straight-through 9-pin connection cable for the RS-232 port
- Optional—mounting bracket kits (available from Sierra Wireless)

Caution: *The device has a hardened case for use in industrial and extreme environments. If you are installing it in these types of environments, use cables designed and specified for use in these types of environment to avoid cable failure.*

Installation Overview

The steps for a typical installation are:

1. Insert the SIM card.
2. Connect the antenna.
3. Connect the data cables.
4. Connect the power.
5. Connect a laptop and configure ACEmanager.
6. Mount the LS300.

The following sections describe these steps in detail.

Note: Depending on where you are installing the LS300, you may want to mount the device before connecting the antenna, cables and power.

Step 1—Insert the SIM Card

If your AirLink device requires a SIM card and it has not been installed by the reseller, insert a SIM card into the device before connecting any external equipment or power to the device.

To install the SIM card:

1. Remove the SIM card cover.
2. Orient the SIM card, as shown in [Figure 3-1](#) with the gold contacts facing down. Gently slide the SIM card into the slot in the slot until it stops.

Note the direction of notched corner for proper SIM card alignment

Figure 3-1: Installing the SIM card

3. Replace the SIM card cover.

Step 2—Connect the Antennas

The LS300 has 2 antenna ports. Both are SMA female bulkhead connectors.

- **Main antenna port:** This is the primary transmit and receive port for the radio.
- **Rx Diversity/GPS antenna port:** This is a dual function receive/diversity port and GPS receive port. When used for GPS, a bias supply may be enabled in the ALEOS software for use with active antennas.

Note: The diversity/GPS port is receive only, it does not transmit.

Note: The antenna should not exceed the maximum gain specified in [RF Exposure](#) on page 45. In more complex installations (such as those requiring long lengths of cable and/or multiple connections), you must follow the maximum dBi gain guidelines specified by the radio communications regulations of the Federal Communications Commission (FCC) or Industry Canada or your country's regulatory body (if used outside the US)

To install the antennas:

1. Connect the RF antenna to the SMA antenna connector.
Mount the RF antenna so there is at least 20 cm between the antenna and the user or by-stander.
2. If used, connect either a GPS antenna or a diversity RF antenna to the SMA GPS/Diversity antenna connector.
Take extra care when attaching the antenna to the SMA connectors. Finger tight (approximately 5–7 in-lb.) is sufficient and the max torque should not go beyond 10 in-lb. (1.1 N-m).
Mount the GPS antenna where it has a good view of the sky (at least 90°).
3. Connect the antenna cable to the GPS/Diversity antenna connector.

Note: If the antenna is located away from the device, keep the cables as short as possible to prevent the loss of antenna gain. Route the cables so that they are protected from damage and will not be snagged or pulled on. There should be no binding or sharp corners in the cable routing. Excess cabling should be bundled and tied off. Make sure that the cables are secured so that their weight will not loosen the connector from the device over time.

Figure 3-2: Antenna connectors

Step 3—Connect the Data Cables

The LS300 has three ports for connecting data cables:

- [USB Port](#) (Micro B)
- [Ethernet Port](#) (RJ-45)
- [Serial Port](#) (9-pin RS-232)

USB Port

Warning: *Do not use the USB port in a potentially explosive environment.*

- Complies with USB Version 2.0 for high speed operation
- Can be dynamically configured to operate in one of two modes:
- **Virtual Ethernet Port:** The LS300 behaves as if the PC were connected to an Ethernet port, allowing access to the Internet and the LS300's internal web server. This is the default setting.
- **Virtual Serial Port:** The LS300 behaves as if it was connected to a standard serial port. The primary use of this interface is for the AT command line interface of ALEOS and for diagnostic access to the radio module.

Note: By default, the USB port is configured as a virtual Ethernet port.

A Windows driver must be installed on the PC in order to support USB use. The drivers are available for download at source.sierrawireless.com.

The ALEOS Software Configuration User Guide contains the details of USB mode configuration and driver installation.

We recommend you:

- Use a USB 2.0 cable
- Connect directly to your computer for best throughput.

Ethernet Port

- IEEE 802.3 specification for 100 Mbps speed (Fast Ethernet) with fallback to 10 Mbps
- Auto-crossover support
- Auto-sensing detects the speed of the connecting device for 100 baseT or 10 baseT

Serial Port

- 9-pin serial port connects directly to most computers or other devices with a standard serial straight-through cable

Note: If you have a DCE device, you need to use a null modem (cross-over) cable.

- Used for device configuration and debugging.
- Complies with the EIA RS-232D specification for DCE equipment
- Output driver levels swing from -7 VDC to +7 VDC with normal loading

Figure 3-3: 9-Pin Serial Connector Diagram

Table 3-1: Serial Connector Pin-out

Name	Pin	Description	Type
DCD	1	Data Carrier Detect	OUT
TXD	2	Transmit Data	OUT
RXD	3	Receive Data	IN
DTR	4	Data Terminal Ready	IN
GND	5	Main GND. Connected internally to BOARD_GND	GND
DSR	6	Data Set Ready	OUT
RTS	7	Ready To Send	IN
CTS	8	Clear To Send	OUT
RI	9	Ring Indicator	OUT

Step 4—Connect the Power

There are two types of optional power cables available from Sierra Wireless:

- Cable with an AC adapter that is usually used for indoor, fixed applications where the device runs off line power.
- DC power cable that is usually used in installations where the device runs on battery power.

Note: The DC cable should be no longer than 10 feet (3 meters).

Note: Electrical installations are potentially dangerous and should be performed by personnel thoroughly trained in safe electrical wiring procedures.

The LS300 supports a voltage range between 7 volts, direct current (VDC) and 28 VDC, and is designed for both 12 VDC and 24 VDC electrical systems.

Fusing

For DC installations, Sierra Wireless recommends fusing the power input using a 2.0 A fast-acting fuse.

Power Supply Conditioning

For automotive applications, the supply voltage may momentarily drop below 7 V during engine cranking, causing the LS300 to reboot. If this happens, the LS300 restarts automatically and is ready for use once the reboot is complete. If your application requires the LS300 to continue operating during engine cranking, add external power conditioning circuits to ensure the supply voltage does not drop below the rated value (7.0 V).

Grounding the LS300 Chassis

For DC installations (with a fixed “system” ground reference), Sierra Wireless recommends always grounding the LS300 chassis to this system ground reference. To ensure a good grounding reference, use a short wire with a gauge of 18 AWG or larger connected to one of the mounting screws.

Power Connector on the LS300

If you are using the DC power cable to connect the LS300 to a power source:

- Pin 1 (Power)—Use the red wire in the DC cable to connect Pin 1 to the power source. Include a 2.0 A fast-acting fuse in the input power line. Sierra Wireless recommends using a continuous (unswitched) DC power source. For installations that require the device to be turned on/off, Sierra Wireless recommends using the Ignition Sense (pin 3) input for this purpose.
- Pin 2 (Ground)—Use the black wire in the DC cable to connect Pin 2 to ground. See also [Grounding the LS300 Chassis](#) on page 22.
- Pin 3 (Ignition Sense)—Sierra Wireless recommends always using the Ignition Sense wire to turn the gateway off. It should not be turned off by disconnecting power.

For installations that require the LS300 to be turned on/off, use the white wire in the DC cable to connect Pin 3 to:

- A vehicle ignition for turning the LS300 on when the ignition is on
- A low voltage monitor for turning the LS300 off when the supply voltage drops below a defined level.

For installations where the LS300 is permanently on (never turned on/off), connect the white wire to the red wire.

Pin 3 can be used as the trigger for the low power mode. For more information, refer to the ALEOS Software Configuration User Guide (Services chapter). If desired, you can also configure the LS300 to notify you when it goes into Low Power mode. For details, refer the ALEOS Software Configuration User Guide (Events Reporting chapter).

Note: Sierra Wireless strongly recommends that you use an unswitched VCC, with Pin 3 (white wire on DC cable) connected to the ignition (if you want the LS300 on when the ignition is on) or connected to a low voltage monitor (if you want the LS300 to turn off when the voltage drops below a defined level). See [Figure 3-4](#) on page 23. This is particularly important for when the input power supply is not constant, such as vehicle installations.

- **Pin 4 (General Purpose I/O) (Optional)**—Use the green wire in the DC cable to connect Pin 4 to a switch or relay on an external device you want to monitor. For more details, see [page 24](#).

See [Figure 3-4](#) and [Table 3-2](#).

Figure 3-4: DC power cable connections (Colors indicate DC cable wire colors.)

Table 3-2: Power Connector Pin and DC cable Wires

Pin	Name	Associated DC Cable Wire Color	Description	Type
1	Power	Red	Main power supply for device	PWR
2	GND	Black	Main device ground	PWR
3	IGN Sense	White	Ignition Sense: Connected to the vehicle ignition or an external switch, for example on a low voltage shutdown. When the LS300 is connected to a low voltage shutdown, the LS300 is off when this pin is either open-circuit or grounded, and on when this pin is connected to power.	I
4	GPIO	Green	User configurable digital input/output or analog voltage sensing input. Connect to switch, relay or external device. Maximum rating is 30 V, 150 mA. For more information, see Pin 4 (General Purpose I/O) on page 24 and the ALEOS Software Configuration User Guide.	I/O

Pin 4 (General Purpose I/O)

This pin is a digital input/output (green wire on DC cable).

Pin 4 can:

- Monitor digital inputs and outputs
- Drive a relay
- Monitor analog input

It has a maximum rating of 30 V and 50 mA sink current. For information on configuring Pin 4 (Digital Input/Relay Output 1 in ACEmanager) refer to the ALEOS Software Configuration User Guide (I/O Configuration chapter).

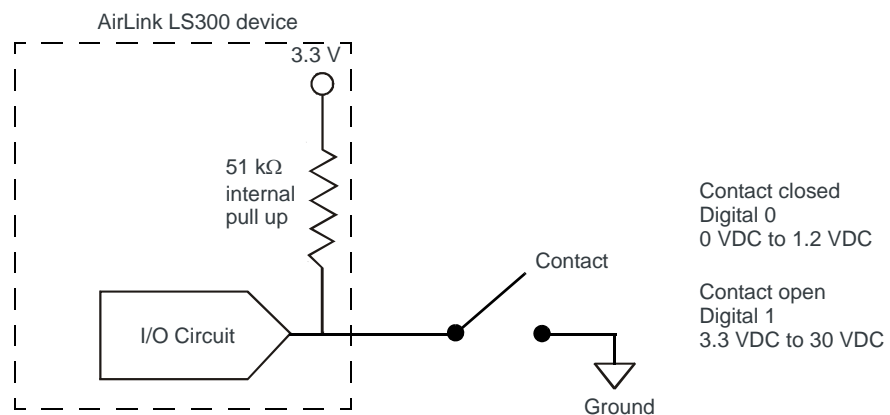

You can use Pin 4 in conjunction with events reporting to configure the LS300 to send a report when the state of the monitored device changes, for example when a switch is opened or closed. For more information, refer to the ALEOS Software Configuration User Guide (Events Reporting chapter).

Digital Input

As a digital input, it monitors a switch, using its opening or closing to record events or monitoring external voltages of up to 30VDC. For example, you could use it to measure the voltage on a 24VDC light bulb and have the device react when it turns on.

When the switch, or input voltage is:

- Open (3.3 VDC to 30 VDC) – It is read as a digital input=1
- Closed (0 to 1.2 VDC) – It is read as a digital input=0

Examples: Door opening/closing, valve opening/closing, ignition on/off, tow bar up/down, empty/full container.

Figure 3-5: Digital Input Operation

Digital Output/Relay Output

As a digital output/relay output, it can trigger an alarm, siren, door lock or opens a valve or a switch. Pin 4 is an open collector transistor output normally at 3.3 VDC. When triggered, it is pulled to low.

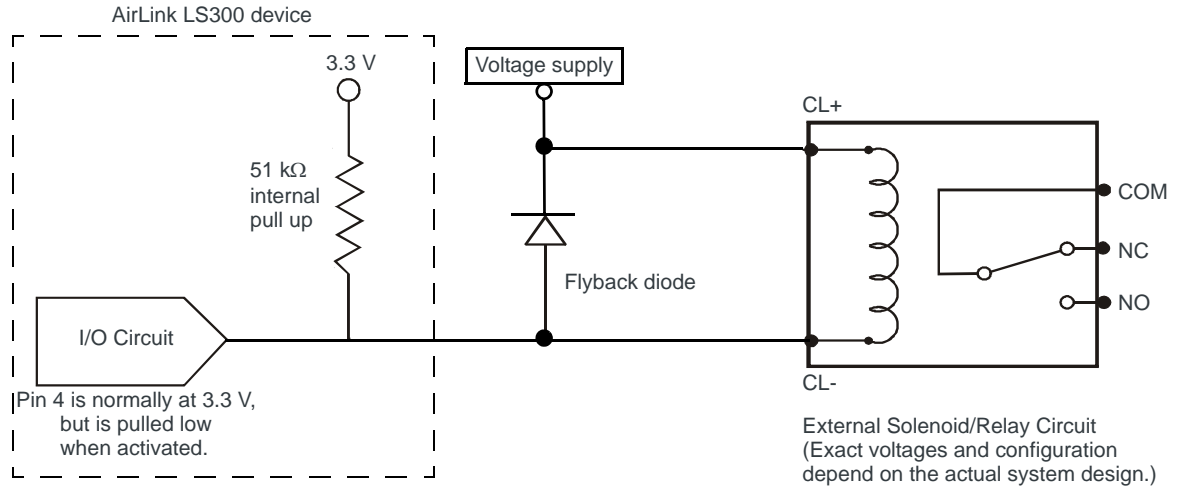

Figure 3-6: Digital Output Operation

The initial state of the digital output when the device is rebooted is configurable in ACEmanager.

Note: Some solenoids/relays include a flyback diode built into the unit. For those that do not, Sierra Wireless recommends a flyback diode with a voltage rating at least double the relay voltage and a current rating at least double the relay ON current to avoid damage to the LS300 input. A common 1N4007 will work for most applications.

Analog Input

As an analog input (voltage sensing pin), it monitors voltage changes in small increments. This allows you to monitor equipment that reports status as an analog voltage.

Pin 4 detects inputs of 0–30VDC across the pins to ground. When used with a sensor to transform values into voltages, the pins can monitor measurements like temperatures, pressures or the volume of liquid in a container.

ACEmanager can transform these voltages into meaningful values. You can also use the Event Reporting feature in ACEmanager to configure reports to be sent when an analog threshold is crossed. For more information, refer to the ALEOS Software Configuration User Guide (I/O Configuration and Events Reporting chapters).

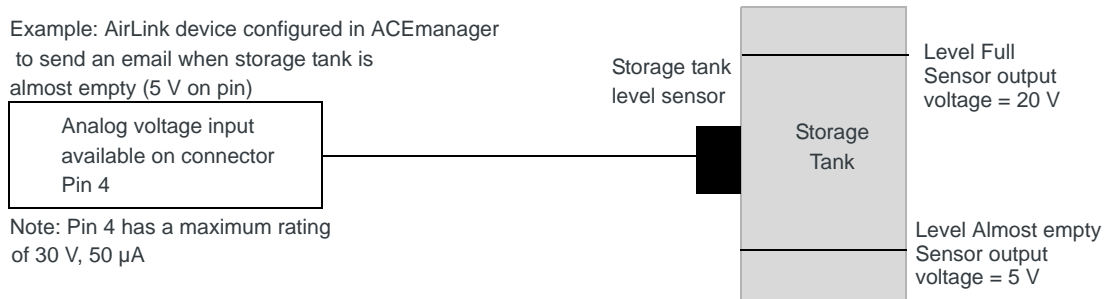

Figure 3-7: Analog Voltage Input Operation

Step 5—Check the device operation

- When power is supplied to the AirLink device, it powers up automatically, as indicated by the flashing LEDs. If it does not turn on, ensure that the:
 - Power connector is plugged in
 - Power cable is connected power (line or battery power)
 - Power is turned on or the battery is fully charged
 - Ignition Sense (pin 3) is connected to the battery or power source (see [Step 4—Connect the Power](#) on page 21 for details)

LED Behavior

Table 3-3: LED Behavior

LED	Color/Pattern	Description
Power	Off	No power or input voltage $\geq 28\text{VDC}$ or $\leq 7\text{VDC}$
	Solid Green	Device is connected to nominal power and is operating normally.
	Flashing Yellow/Green	Device has a GPS fix.
	Solid Yellow	Device is entering low power mode or system low level boot.
	Solid Red	Device is not operational (failure or in low power mode).
Signal	Solid Green	Good signal (RSSI ≥ -85 dBm)
	Solid Yellow	Marginal signal (-100 dBm $<$ RSSI $<$ -85 dBm)
	Solid Red	Poor signal (-110 dBm \leq RSSI \leq -100 dBm)
	Flashing Red	No signal (RSSI $<$ -110 dBm)
Network	Solid Green	Network Ready (LTE service available)
	Flashing Yellow/Green	Network Ready (No LTE service available)
	Flashing Green	Network Ready—Roaming (LTE service available)
	Flashing Yellow/Green/Off	Network Ready—Roaming (No LTE service available)
	Flashing Yellow	No Service
	Solid Yellow	Connecting to the network
	Flashing Red	Authentication/Negotiation failed (EV-DO only)
	Solid Red	Link down No cellular network is present, no network coverage at current location, or the device is in radio passthru mode
The Activity LED function depends on the version of ALEOS software running on the device.		
Activity (ALEOS 4.3.6 or earlier)	Off	Normal operation
	Flashing Green	Traffic is being transmitted or received over the WAN interface.

Table 3-3: LED Behavior

LED	Color / Pattern	Description
Activity (ALEOS 4.4.0 or later)	Off	Normal operation
	Flashing Green	Traffic is being transmitted or received over the WAN interface.
	Flashing Red	Traffic is being transmitted or received over the serial port. (This behavior only appears if the AirLink LS300 is configured to display it. Refer to the ALEOS Software Configuration Guide for details.)
	Flashing Yellow	Traffic is being transmitted or received over both the WAN interface and the serial port. (This behavior only appears if the AirLink LS300 is configured to display it. Refer to the ALEOS Software Configuration Guide for details.)

Ethernet LEDs

The connector has two LEDs that indicate speed and activity. When looking into the connector:

- Activity – The right LED is solid yellow when a link is detected (the cable is plugged in) and blinks when there is activity.
- Connection Speed – The left LED is green to indicate a 100 Mbps link and orange when either no cable is connected or a 10 Mbps link is detected.

Step 6—Startup and Software Configuration

You can configure the ALEOS software on the LS300 using:

- [ACEmanager](#) (browser-based application)
- [AirLink Management Service](#) (cloud-based application)
- [AT Commands](#)

Configuring with ACEmanager

To access ACEmanager:

1. Connect a laptop to the device with an Ethernet cable.
2. Launch your web browser and go to **http://192.168.13.31:9191**.

Note: It takes the device 2–3 minutes to respond after power up.

Figure 3-8: ACEmanager login window

3. Enter the default password, **12345** and click Log in.
4. Refer to the ALEOS Software Configuration User Guide for information on how to use ACEmanager to configure your LS300.

Configuring with AirLink Management Service

AirLink Management Service (ALMS) allows the management of all your devices remotely from one user interface.

Some of its features include:

- Centralized, remote monitoring for all of your AirLink devices.
- Continuous status monitoring of important health data such as signal strength.
- Location monitoring, including world map views.
- Complete ALEOS reporting and configuration, including historical views of ALEOS information.
- Configure individual devices or use templates to perform batch configurations of your AirLink devices.
- Single click over-the-air firmware updates to all your devices.
- Compatible with all carriers or mobile network operators.

To get started either call your AirLink reseller or visit: www.sierrawireless.com/ALMS

Configuring with AT Commands

For a complete list of AT commands, refer to the ALEOS Software Configuration User Guide.

Step 7—Mounting the LS300

Warning: *This device is not intended for use close to the human body. Antennas should be at least 8 inches (20 cm) away from the operator.*

Mount the device where:

- There is easy access to the cables
- Cables are not bent, constricted, close to high amperages or exposed to extreme temperatures
- The front panel LEDs are easily visible
- There is adequate airflow
- It is away from direct exposure to the elements, such as sun, rain, dust, etc.
- It will not be hit or come into contact with people, cargo, tools, equipment, etc.

Mounting Brackets

Sierra Wireless has two mounting bracket kits.

- Mounting Bracket —Screw in for LS300 (P/N 6000571) for use on flat surfaces, including walls or counters.
- DIN Rail Mounting Bracket for LS300 (P/N 6000558)

Flat Surface Mount

If you are mounting the LS300 on a flat surface, order mounting bracket kit P/N 6000571 (Mounting Bracket —Screw in for LS300) from Sierra Wireless. The kit contains:

- Bracket – Qty 1
- Screw M3 – Qty 4
- Screw M4 – Qty 4

Figure 3-9: LS300 Mounting Bracket for flat surfaces

To mount the LS300 on a flat surface using the mounting bracket:

1. Line up the LS300 with either set 1 or set 2 holes, depending on the desired orientation. (See [Figure 3-9](#).)
2. Attach the LS300 to the bracket with the three M3 mounting screws. Torque the screws to a maximum of 10 in-lb. (1.1 N-m).
3. Attach the bracket/LS300 combination to the mounting surface.
4. Connect the bracket to ground (the battery or power source negative terminal) by connecting a grounding strap under one of the mounting bracket screws. This provides protection from electrostatic discharges.

DIN Rail Mount

If you are mounting the LS300 on a DIN rail, order mounting bracket kit P/N 6000558 (DIN Rail Mounting Bracket for LS300) from Sierra Wireless. The kit contains:

- L-shaped DIN Rail Mounting Bracket—Qty 1
- DIN Rail Clip (35 mm EN 50022)—Qty 1
- Screw M3—Qty 4
- Screw M4—Qty 4

Figure 3-10: DIN Rail Mounting Bracket

To attach the LS300 to a horizontally mounted DIN rail:

1. Install the SIM card. (See [Step 1—Insert the SIM Card](#) on page 18.)
2. Test the network connectivity.

It is important to first ensure network connectivity because once the device is attached to the L-shaped DIN rail mounting bracket, access to the SIM card is restricted.

- a. Connect the LS300. Power it up and ensure that you have network connectivity. (See [Step 4—Connect the Power](#) on page 21)

3. Place the LS300 on the DIN rail mounting bracket, lining up the mounting holes on the underside of the device with the holes on the DIN rail mounting bracket.
4. Use the M3 screws provided to attach the LS300 to the bracket. Torque the screws to a maximum of 10 in-lb. (1.1 N-m).
5. Use the screws provided to attach the DIN rail clip to the bracket.
6. Attach the DIN rail clip to a horizontal DIN rail, with the spring clip at the bottom, taking into account the location information described in [Step 7—Mounting the LS300](#) on page 28.

Note: The DIN rail bracket and clip in the kit Sierra Wireless provide is not intended for use on DIN rail that is mounted vertically.

Rebooting the LS300

Rebooting resets the LS300, but leaves custom settings intact. To reboot the LS300:

- On the device, press and release the Reset button (1–6 seconds)
- In ACEmanager, click the Reboot button on the toolbar.

Reset the LS300 to factory default settings

To reset the device to the factory default settings:

- On the device, press and hold the Reset button for 7–15 seconds. (Release the button when all the LEDs turn yellowish-green.)
If you hold the button down for longer than 15 seconds, the device reboots, but does not reset to the factory default settings.
The resetting and reboot cycle takes about 2 minutes to complete. Once the LEDs resume their normal operating behavior, the reset is complete.
- In ACEmanager, go to Admin > Advanced and click the Reset to Factory Default button.

Antenna Specifications

Table 4-1: Main Antenna Specifications

Parameter	Min	Typ	Max	Units	Notes
Impedance	—	50	—	Ω	Antenna load impedance
VSWR	—	—	2.5:1	—	Maximum allowed VSWR of antenna
Gain	—	—	5	dBi	Low band, including cable loss (for FCC and CE compliance)
	—	—	4	dBi	High band, including cable loss (for FCC and CE compliance)

Table 4-2: Rx/Diversity Antenna Specifications

Parameter	Min	Typ	Max	Units	Notes
Impedance	—	50	—	Ω	Antenna load impedance
VSWR	—	—	2.5:1	—	Maximum allowed VSWR of antenna

Table 4-3: GPS Active Antenna Specifications

Parameter	Min	Typ	Max	Units	Notes
Impedance	—	50	—	Ω	Antenna load impedance
VSWR	—	—	2.5:1	—	Maximum allowed VSWR of antenna
3D Gain	-5	—	—	dBi	Average
Isolation	10	—	—	dB	GPS to Main in all relevant bands
Power	3.0 —	3.3 30	3.5 125	V mA	External GPS antenna supply. This supply is short circuit protected. This protection will turn off the supply if the maximum current is exceeded until the fault condition is removed.

RF Specifications

Frequency Bands

Table 4-4: CDMA Frequency Bands

Band	Parameter	Frequency
BC0 (US Cellular)	Tx frequency band	824 – 849 MHz
	Rx frequency band	869 – 894 MHz
	Radio performance	Class III
BC1 (US PCS)	Tx frequency band	1850 – 1910 MHz
	Rx frequency band	1930 – 1990 MHz
	Radio performance	Class II

Table 4-5: HSPA North American Frequency Bands

Band	Parameter	Frequency
Band I WCDMA 2100	Tx frequency band	1920 – 1980 MHz
	Rx frequency band	2110 – 2170 MHz
	Radio performance	Class III
Band II WCDMA 1900	Tx frequency band	1850 – 1910 MHz
	Rx frequency band	1930 – 1990 MHz
	Radio performance	Class III
Band V WCDMA 850	Tx frequency band	824–849 MHz
	Rx frequency band	869–894 MHz
	Radio performance	Class III
Band VI WCDMA 800	Tx frequency band	830–840 MHz
	Rx frequency band	875–885 MHz
	Radio performance	Class III

Table 4-6: HSPA International Frequency Bands

Band	Parameter	Frequency
Band I WCDMA 2100	Tx frequency band	1920 – 1980 MHz
	Rx frequency band	2110 – 2170 MHz
	Radio performance	Class III

Table 4-6: HSPA International Frequency Bands (Continued)

Band	Parameter	Frequency
Band VIII WCDMA 900	Tx frequency band	880 – 915 MHz
	Rx frequency band	925 – 960 MHz
	Radio performance	Class III

Table 4-7: GSM/GPRS/EGPRS Frequency Bands

Band	Parameter	Frequency
GSM 850	Tx frequency band	824 – 849 MHz
	Rx frequency band	869 – 894 MHz
	Radio performance	GPRS Class 4 EGPRS Class E2
GSM 900	Tx frequency band	880 – 915 MHz
	Rx frequency band	925 – 960 MHz
	Radio performance	GPRS Class 4 EGPRS Class E2
GSM 1800	Tx frequency band	1710 – 1785 MHz
	Rx frequency band	1805 – 1880 MHz
	Radio performance	GPRS Class 1 EGPRS Class E2
GSM 1900	Tx frequency band	1850 – 1910 MHz
	Rx frequency band	1930 – 1990 MHz
	Radio performance	GPRS Class 1 EGPRS Class E2

Radio Module Conducted Transmit Power

The following tables provide radio module conducted transmit power specifications. The radio module type is printed on the label on the bottom of the gateway and is available in ACEmanager (Status > About).

Table 4-8: Verizon Wireless and Sprint Conducted Transmit Power (Radio Module SL5011^a)

Technology	Conducted Tx Power (dBm)
IS-95 IS-2000 1xEV-DO, Rev. 0 1XEV-DO, Rev. A	+24±1

a. You can view the Radio Module Type in ACEmanager (Status > About).

Table 4-9: AT&T and Canada Conducted Transmit Power (Radio Module SL8090^a)

Band	Conducted Tx Power (dBm)	Notes
GSM Bands		
GSM 850	+33±2	GSMK, connectorized (Class 4)
	+27±3	8 PSK, connectorized (Class E2)
EGSM 900	+33±2	GSMK, connectorized (Class 4)
	+27±3	8 PSK, connectorized (Class E2)
DCS 1800	+30±2	GSMK, connectorized (Class 4)
	+26±3	8 PSK, connectorized (Class E2)
PCS 1900	+30±2	GSMK, connectorized (Class 4)
	+26±3	8 PSK, connectorized (Class E2)

SIM Socket (HSPA Devices)

- The SIM socket is a 6-pin socket operated at 1.8 V/3.3 V.
- This interface is compliant with the applicable 3GPP standards for USIM.

GPS Specifications

Table 4-11: GPS Performance

Description	EV-DO (SL501x)	HSPA+ (SL809x)
Protocols	TAIP, NMEA	TAIP, NMEA
Acquisition Times	Re-acquisition: Hot start: 9 sec. Cold start: 39 sec.	Hot start: < 3 sec. Cold start: < 45 sec.
Accuracy (Horizontal)	< 3m (50%), < 8 m (90%) Velocity: 0.06 m/sec.	< 10 m (open sky)
Sensitivity	Acquisition: -158 dBm Tracking: -160 dBm Cold start: -145 dBm	Acquisition: -153 dBm Tracking: -155 dBm Cold start: -145 dBm

Environmental Specifications

Table 4-12: Operational/Non-Operational Environmental Specifications

Category	Op/Non-op	Reference
Vibration	Operational	IEC 60068-2-64
Mechanical Shock	Operational	MIL-STD-810F, 516.5C, Procedure I
Drop	Non-operational	MIL-STD-810F, Method 516.5D
Temperature	Operational	MIL-STD-810F, 501.4, 502.4 -30°C to +70°C (-22°F to +158°F) -40°C to +85°C (-40°F to +185°F) at reduced RF level
	Non-operational	MIL-STD-810F, 501.4, 502.4 -40°C to +85°C (-40°F to +185°F)
Electrostatic Discharge	Operational	IEC 61000-4-2
Surface Abrasion	Non-operational	IEC 60068-2-70 Part 2, Test Xb
Relative Humidity	Non-operational	MIL-STD-810F, 507.4
IP Rating	Non-operational	IEC 60529 IP31
Cargo Vibration	Non-operational	ISTA 2A 2001, test categories 1, 4, 5, & 6

Table 4-13: Environmental Specifications

Category	Reference
Free Fall Test	IEC 60068-2-2
Low Storage Temperature	IEC 60068-2-1
Thermal Shock	MIL-STD-810, Method 501.4, 502.4
Water Resistance Test	IEC 60529

Reliability Specifications

The LS300 has a MTBF of 10.7 years for both CDMA and HSPA versions.

MTBF calculations are performed per:

- Telcordia “Reliability Prediction Procedure for Electronic Equipment” document number SR-332, Issue 1
- Method I (parts count) is used

MTBF is based on Accelerated Life Test (ALT). The ALT sequence acceleration factor is calculated using classical reliability formulas like:

- Arrhenius Temperature Acceleration Model
- Peck Temperature Humidity Acceleration Model

- Coffin–Manson Temperature Cycle Acceleration Model
- Power Spectral Density Power Law–Vibration Acceleration Model

Mechanical Specifications

Figure 4-1: AirLink LS300 Mechanical Specifications

Table 4-14: Mechanical Specifications

Length	76 mm (3.0 in) Excluding SMA's
Width	90 mm (3.5 in) Excluding DB-9
Height	25 mm (1.0 in)
Weight	190 g (6.7 oz)
Construction Materials	The LS300 case is die cast using aluminum alloy A380, which is powder coated gray
RoHS	The LS300 complies with the Restriction of Hazardous Substances Directive (RoHS). This directive restricts the use of six hazardous materials in the manufacture of various types of electronic and electrical equipment.

Power Specifications

Table 4-15: Power Supply Specifications

Pin	Name	Specification	Parameter	Minimum	Typical	Maximum
1	VCC	Voltage range	VCC	7 V	12 V	28 V
		Ripple voltage	—	—	—	100 mVpp

Table 4-16: Ignition Sense, Digital I/O, and Analog Voltage Sensing Pins Specifications

Pin	Name	Specification	Parameter	Minimum	Typical	Maximum
3	IS (Input only)	Input low state voltage range	VIL	-0.3 V	0 V	1.2 V
		Input high state voltage range	VIH	2.0 V	—	30 V
		Input leakage current (3.3VDC IN)	IIN	—	350 μ A	—

*Note: If you do not connect this pin to the ignition, you **MUST** connect it to the positive terminal of your power supply or battery. The device looks for a qualified voltage on this pin as part of the power up sequence (7–28 VDC). If it doesn't see it, the device will not turn on. If you are using a Sierra Wireless AC power adapter, the connection is inside the cable.*

Table 4-16: Ignition Sense, Digital I/O, and Analog Voltage Sensing Pins Specifications

Pin	Name	Specification	Parameter	Minimum	Typical	Maximum
4	GPIO (Input)	Input low state voltage range	VIL	-0.5 V	0	1.2 V
		Input high state voltage range	VIH	1.3 V	3.3 V	30 V
		Input leakage current (3.3VDC IN)	IIN	—	58 μ A	—
	Typical application input source is a dry switch contact to ground. Pin includes an internal 51K Ω pull up to 3.3VDC.					
	DIGIO (Output)	Open drain drive to ground	Idc	—	150 mA	200 mA
		Maximum open circuit voltage applied	Voc	—	3.3 V	30 V
		V @ 200 MA	Voh	—	0.2 V	0.5 V
		Typical application is to drive a relay coil to ground. Pin includes an internal 51K Ω pull up to 3.3VDC. This output is not recommended as a current source.				
	DIGIO (Analog Voltage Input Only)	Input voltage range	VI	-0.3	0	30
		ADC resolution: 10 bits				
Typical application is to monitor an analog voltage.						

Power Consumption

Table 4-17: Power Consumption (mA @ 12 VDC)

Technology	Idle	Typical	Maximum
HSPA+	224 mA	245 mA	430 mA
CDMA	220 mA	257 mA	427 mA
Low Power Standby Mode (All models): < 68			

Table 4-18: Power Consumption (Watts)

Technology	Idle	Typical	Maximum
HSPA+	2.6 W	2.8 W	5.0 W
CDMA	2.5 W	3.0 W	5.0 W

AC Power Adapter Specifications

This section describes the specifications for the AC power adapter that comes with the AirLink LS300.

Table 4-19: AC Power Adapter Input Specifications

	Minimum	Typical	Maximum
Input			
Input Voltage	90 VAC	100–240 VAC	264 VAC
Input frequency	47 Hz	50/60 Hz	63 Hz
<p><i>Note: Input voltage range is 90 VAC to 264 VAC. Maximum input current is 500 mA at 100–240 VAC. Inrush current will not exceed 70 A at 100–240 VAC input and maximum load from a cold start at 25°C.</i></p>			

AC Power Adapter Output

Table 4-20: AC Power Adapter Output Specifications

		Minimum	Typical	Maximum	Test conditions
Output Data	12.0 VDC	—	—	—	—
Output Voltage	—	11.4 VDC	12.0 VDC	12.6 VDC	0 ~ 1.5 A loading

AC Power Adapter Environmental

Table 4-21: AC Power Adapter Environmental Specifications

Operating	
Operating Temperature	0°C ~ 40°C (operates normally)
Relative Humidity	10% ~ 90%
Altitude	Sea level to 2,000 meters
Vibration	1.0 mm, 10–55 Hz, 15 minutes per cycle for each axis (X, Y, Z)
Non-operating	
Storage temperature	-30°C ~ 70°C
Relative Humidity	10% ~ 90%
Vibration and Shock	MIL-STD-810D, method 514

AC Power Adapter Reliability and Quality Control

MTBF

When the power supply is operating within the limits of this specification, the MTBF is at least 50,000 hours at 25°C (MIL-HDBK-217F).

AC Power Adapter Safety Standards

The power supply is certified with the following international regulatory standards:

Regulatory Agency	Country or Region	Certified	Standard
UL	USA	Approved	UL60950-1
GS	Europe	Approved	EN60950-1
CE	Europe	Approved	EN60950-1
SAA	Australia	Approved	AS/NZS 60950
CCC	China	Approved	GB4943
CUL	Canada	Approved	CSA C22.2 NO.60950-1

AC Power Adapter EMC Standards

The power supply meets the radiated and conducted emission requirements for EN55022, FCC Part 15, Class B, GB9254.

AC Power Adapter Hazardous Substances

- EU Directive 2011/65/EU “RoHS”
- EU Directive 2002/96/EC “WEEE”
- REACH

AC Power Adapter Energy Efficiency

- No-load power consumption is less than 0.3 W at input 115/230 VAC 60/50 Hz.
- Average active mode efficiency is greater than 80.4% at input 115/230 VAC 60/50 Hz.
- International Efficiency Level V
- Energy Star Energy Efficiency requirements for external power supplies (EPS Version 2)
- Canada’s Energy Efficiency Regulations for external power supplies

5: Regulatory Information

Important Information for North American Users

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

Warning: *Changes or modifications to this device not expressly approved by Sierra Wireless could void the user's authority to operate this equipment.*

RF Exposure

In accordance with FCC/IC requirements of human exposure to radio frequency fields, the radiating element shall be installed such that a minimum separation distance of 20 cm should be maintained from the antenna and the user's body.

Warning: *This product is only to be installed by qualified personnel!*

To comply with FCC/IC regulations limiting both maximum RF output power and human exposure to RF radiation, the maximum antenna gain must not exceed the specifications listed below for the device used.

		FCC ID/IC	
		N7NSL8090 / 2417C-SL8090	N7NSL5011 / 2417C-SL5011
Antenna Gain	Cellular Band	6.2 dBi	8.5 dBi
	PCS Band	3.8 dBi	4.15 dBi

EU

Sierra Wireless hereby declares the AirLink LS300 devices is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.

The LS300 displays the CE mark.

Warning: Changes or modifications to this device not expressly approved by Sierra Wireless could void the user's authority to operate this equipment.

Warning: This product is only to be installed by qualified personnel.

Declaration of Conformity

The Declaration of Conformity made under Directive 1999/5/EC is available for viewing at: source.sierrawireless.com/resources/airlink/certification_and_type_approval/ls300_ce_declaration_of_conformity/.

WEEE Notice

If you purchased your AirLink LS300 in Europe, please return it to your dealer or supplier at the end of its life. WEEE products may be recognized by their wheeled bin label on the product label.

6: Acronyms

Table F-1: Acronyms

Acronym or term	Definition
1xEV-DO	<p>Single Carrier (1X) EVolution–Data Only</p> <p>A high-speed standard for cellular packet data communications. It supports Internet connections with data rates up to 3.1 Mbps. (downlink from the network) and 1.8 Mbps (uplink to the network). Average data rates are approximately: Rev. A: 600-1300 kbps. (downlink from the network) and 300-400 kbps (uplink to the network) Rev. 0: 400-700 kbps (downlink from the network) and 40-80 kbps (uplink to the network) Actual speed depends on the network conditions. Compare to 1X.</p>
1X	<p>Single Carrier (1X) Radio Transmission Technology</p> <p>A high-speed standard for cellular packet data communications.</p> <p>1x supports Internet connections with data rates up to 153 kbps (simultaneously in each direction—downlink and uplink). Actual speed depends on the network conditions. Compare to 1xEV-DO.</p>
3GPP	<p>3rd Generation Partnership Project</p> <p>3GPP unites 6 telecommunications standard development organizations (ARIB, ATIS, CCSA, ETSI, TTA, TTC), and provides their members with a stable environment to produce Reports and Specifications that define 3GPP technologies.</p>
AT	<p>A set of device commands, preceded by “AT” originally developed by Hayes, Inc. for their devices.</p> <p>The structure (but not the specific commands, which vary greatly from manufacturer to manufacturer) is a de facto device industry standard.</p>
CDMA	<p>Code Division Multiple Access</p> <p>A wideband spread spectrum technique used in digital cellular, personal communications services, and other wireless networks.</p> <p>Wide channels (1.25 MHz) are obtained through spread spectrum transmissions, thus allowing many active users to share the same channel. Each user is assigned a unique digital code, which differentiates the individual conversations on the same channel.</p>
cdmaOne	<p>A IS-95 CDMA standard developed by QUALCOMM Inc.</p> <p>Also known as TIA-EIA-95</p>
CE, CE label	<p>The CE label is a mandatory conformity marking for products placed on the market in the European Economic Area (EEA).</p> <p>With the CE marking on a product, the manufacturer declares that the product conforms with the essential requirements of the applicable EC directives.</p>

Table F-1: Acronyms (Continued)

Acronym or term	Definition
DCE	Data Communications Equipment A device that sits between the data terminal equipment (DTE) and a data transmission circuit. Usually the DCE is a modem.
Diversity	Antenna diversity, also called space diversity, is a scheme that uses two or more antennas to improve the quality and reliability of a wireless link. Often, especially in urban and indoor environments, there is no clear line-of-sight (LOS) between transmitter and receiver. Instead the signal is reflected along multiple paths before finally being received. Each bounce can introduce phase shifts, time delays, attenuations, and distortions that can destructively interfere with one another at the aperture of the receiving antenna.
EDGE	Enhanced Data rates for GSM Evolution A digital mobile phone technology that allows improved data transmission rates as a backward-compatible extension of GSM. EDGE is considered a pre-3G radio technology and is part of ITU's 3G definition. Also known as Enhanced GPRS (EGPRS), or IMT Single Carrier (IMT-SC), or Enhanced Data rates for Global Evolution.
EIA	Electronics Industry Association EIA was a standards and trade organization composed as an alliance of trade associations for electronics manufacturers in the United States. They developed standards to ensure the equipment of different manufacturers was compatible and interchangeable. The EIA ceased operations on February 11, 2011, but the former sectors continue to serve the constituencies of EIA.
EMC	Electro Magnetic Compatibility The branch of electrical science which studies the unintentional generation, propagation and reception of electromagnetic energy with reference to the unwanted effects (Electromagnetic interference, or EMI) that such energy may induce.
EMI	Electro Magnetic Interference The disturbance that affects an electrical circuit due to either electromagnetic induction or electromagnetic radiation emitted from an external source.
ERP	Effective Radiated Power A standardized theoretical measurement of radio frequency (RF) energy. It is determined by subtracting system losses and adding system gains.
ESN	Electronic Serial Number The unique first-generation serial number assigned to the LS300 for use on the wireless network. Compare to MEID .
Ethernet	Computer networking technologies for local area networks (LANs).
EU	The European Union Organization of European countries.

Table F-1: Acronyms (Continued)

Acronym or term	Definition
EV-DO	<p>Enhanced Voice-Data Optimized or Enhanced Voice-Data Only (Ev-DO, EV, EVDO, etc.).</p> <p>A telecommunications standard for the wireless transmission of data through radio signals, typically for broadband Internet access. It uses multiplexing techniques including code division multiple access (CDMA) as well as time division multiplexing (TDM) to maximize both individual users' throughput and the overall system throughput.</p>
FCC	<p>Federal Communications Commission</p> <p>The U.S. federal agency responsible for interstate and foreign communications. The FCC regulates commercial and private radio spectrum management, sets rates for communications services, determines standards for equipment, and controls broadcast licensing.</p>
FW	<p>Firmware</p> <p>Software stored in ROM or EEPROM; essential programs that remains even when the system is turned off. Firmware is easier to change than hardware but more permanent than software stored on disk.</p>
GPRS	<p>General Packet Radio Service</p> <p>A packet-oriented mobile data service on 2G and 3G cellular communication systems.</p> <p>GPRS was originally standardized by European Telecommunications Standards Institute (ETSI) in response to the earlier CDPD and i-mode packet-switched cellular technologies. It is now maintained by the 3rd Generation Partnership Project (3GPP).</p>
GPS	<p>Global Positioning System</p> <p>A system that uses a series of 24+ satellites to provide navigational data.</p>
GSM	<p>Global System for Mobile Communications (originally Groupe Spécial Mobile)</p> <p>GSM is a standard developed by the European Telecommunications Standards Institute (ETSI) to describe protocols for second generation (2G) digital cellular networks used by mobile phones.</p>
HSPA	<p>High Speed Packet Access</p> <p>An amalgamation of two mobile telephony protocols: High Speed Downlink Packet Access (HSDPA) and High Speed Uplink Packet Access (HSUPA).</p> <p>This extends and improves the performance of existing 3rd generation mobile telecommunication networks utilizing the WCDMA protocols.</p>
HSPA+	<p>Also called evolved HSPA</p> <p>This allows bit-rates to reach as high as 168 Mbit/s in the downlink and 22 Mbit/s in the uplink. An improved 3GPP standard.</p>
IC	<p>Industry Canada</p> <p>The government department responsible for overseeing and regulating wireless and communication technologies in Canada.</p>

Table F-1: Acronyms (Continued)

Acronym or term	Definition
IEC	<p>International Electrotechnical Commission</p> <p>A non-governmental international standards organization that prepares and publishes International Standards for all electrical, electronic and related technologies – collectively known as “electro technology.”</p>
IOTA	<p>Internet Over The Air</p> <p>An automated feature, supported by some service providers, to perform account setup by making a connection to the CDMA network and using a secure Internet connection to download account parameters to the device.</p>
IS	<p>Interim Standard</p> <p>After receiving industry consensus, the TIA/EIA forwards the standard to ANSI for approval.</p>
IS-95	<p>A 2G mobile telecommunications standard using CDMA to send voice, data and signaling data (such as a dialed telephone number) between mobile telephones and cell sites.</p>
ITU	<p>International Telecommunication Union</p> <p>A specialized agency of the United Nations responsible for issues that concern information and communication technologies.</p> <p>The ITU coordinates the shared global use of the radio spectrum, promotes international cooperation in assigning satellite orbits, and assists in the development and coordination of worldwide technical standards.</p>
kbps	<p>Kilobits per second</p> <p>1000, not 1024, as used in computer memory size measurements of kilobytes.</p>
LED	<p>Light Emitting Diode</p> <p>A semiconductor diode that emits visible or infrared light.</p>
LTE	<p>Long Term Evolution</p> <p>High performance air interface for cellular mobile communication systems.</p>
Mbps	<p>Millions of bits per second, or Megabits per second.</p>
MEID	<p>Mobile Equipment IDentifier</p> <p>The unique second-generation serial number assigned to the device for use on the wireless network. Compare to ESN.</p>
NV	<p>Non-Volatile (memory)</p>
OEM	<p>Original Equipment Manufacturer</p> <p>A company that manufactures a product and sells it to a reseller.</p>
PCS	<p>Personal Communications Services</p> <p>A cellular communication infrastructure that uses a different frequency range than Advanced Mobile Phone System (AMPS).</p>

Table F-1: Acronyms (Continued)

Acronym or term	Definition
PPP	Point to Point Protocol An alternative communications protocol used between computers, or between computers and routers on the Internet. PPP is an enhanced Serial Line Internet Protocol (SLIP).
PRI	Product Release Instructions A file containing the settings used to configure devices for a particular service provider, customer, or purpose.
RF	Radio Frequency
RoHS	Restriction of use of Hazardous substances mandated by EU Directive 2002/95.
RS-232	A series of standards for serial binary single-ended data and control signals connecting between a DTE (Data Terminal Equipment) and a DCE (Data Circuit-terminating Equipment). It is commonly used in computer serial ports.
Rx	Receive
SIM, SIM card	Subscriber identity module or subscriber identification module. An integrated circuit which securely stores the international mobile subscriber identity (IMSI) and the related key used to identify and authenticate subscribers on mobile telephony devices (such as mobile phones and computers).
SKU	Stock Keeping Unit Identifies an inventory item: a unique code, consisting of numbers or letters and numbers, assigned to a product by a retailer for purposes of identification and inventory control.
SLIP	Serial Line Internet (or Interface) Protocol An Internet Protocol designed to work over serial ports and modem connections. On personal computers, SLIP has been largely replaced by the Point-to-Point Protocol (PPP), which has more features and does not require its IP address configuration to be set before it is established. On microcontrollers SLIP is still the preferred way of encapsulating IP packets due to its very small overhead. Also see PPP .
SMS	Short Message Service A feature which allows users of a wireless device on a wireless network to receive or transmit short electronic alphanumeric messages (up to 160 characters, depending on the service provider).
TIA/EIA	Telecommunications Industry Association / Electronics Industry Association A standards setting trade organization, whose members provide communications and information technology products, systems, distribution services and professional services in the United States and around the world.
Tx	Transmit

Table F-1: Acronyms (Continued)

Acronym or term	Definition
UMTS	Universal Mobile Telecommunications System A third generation mobile cellular system for networks based on the GSM standard. Developed and maintained by the 3GPP (3rd Generation Partnership Project), UMTS is a component of the International Telecommunications Union IMT-2000 standard set and compares with the CDMA2000 standard set for networks based on the competing cdmaOne technology.
USB	Universal Serial Bus An industry standard defining the cables, connectors and communications protocols used in a bus for connection, communication and power supply between computers and electronic devices.
